

The
FACIAL
COSMETIC Center
at OhioENT

The Facial Cosmetic Center at OhioENT can assist you with post surgery scar care. Silicone has demonstrated clinical efficacy over all other forms of topical treatments for scars resulting from trauma, surgery, burns or other events that result in broken skin. Kelo-cote is a patented topical silicone gel for the management of scars and for the prevention of abnormal scars in the form of hypertrophic scars and keloids. The silicone gel cross links upon application to form a waterproof, transparent, gas permeable membrane that acts like an extra layer of skin.

Schedule a complimentary skin care consultation with our aesthetician before or after surgery. Pre and post op care of the skin can help minimize healing time and enhance the outcome of a scar. Additional skin care treatments include microdermabrasion, customized facials, chemical peels, pharmaceutical grade home care products, and the Clarisonic Skin Care Brush. Use the coupons provided below for special discounts on a customized facial, microdermabrasion and skin care products including Kelo-Cote.

Sincerely,
Julie Panzera, Aesthetician
